With **US Foods APN Codes**

# TERRAVIVE® worthy of your food

## A Higher Standard

Worthy isn't just our promise. It's our standard.

We make plant-based foodservice disposables worthy of the food they serve. That means Made in the USA, No added Forever Chemicals, and designed to compost without generating microplastics.

Worthy of the food they serve. Worthy of the hands that use them. Worthy of soil they return to. Because we believe the products closest to our food deserve a higher standard.

## From Farm to Foodservice

Every meal begins on a farm. Farmers grow the harvest. Foodservice teams transform it into something that nourishes people.

Terravive completes that story by connecting local farmers and chefs with plant-based disposables made from upcycled raw materials. Just like food, your disposables shouldn't have to travel thousands of miles to get to you.

*Jim, Corn Farmer*
*Growing the future of foodservice*

*Chef Osvaldo, at Balvanera Restaurant*
*Serving the future of foodservice*

# Locally grown.
# Worthy of your food.

We raise the standard for foodservice disposables by manufacturing them locally, using smarter materials, and creating products worthy of the food they hold.

## A Partnership Built on Performance

*"Terravive has been a great partner because they're local, responsive, and committed to domestic manufacturing. It's rewarding to support a growing business while providing compostable products that help move our sustainability initiatives forward."*

*~ Emily Williams, Assistant Director of Sustainability for Dining and Housing, Virginia Tech University*

VIRGINIA TECH

# disposables grown locally

Every Terravive product is born on American farms, where renewable plants are grown and then transformed into disposables across 16 U.S. manufacturing facilities before reaching foodservice operators. From farm to foodservice, our plant-based disposables are made close to home: supporting local farmers and American manufacturing with quality standards you can trust.

Because how a product is made matters just as much as what it's made from.

## Sustainability Begins at the Source

**End of life is only one part of the story.** Sustainability is more than what happens after a product is used. It starts at the beginning: with the materials we choose, where they come from, how products are made, and the journey they take to reach you. Terravive creates plant-based, compostable products made locally from upcycled raw materials and manufactured close to home, helping build a more transparent and reliable supply chain from farm to foodservice.

*Reem, Pastry Chef at Balvanera Restaurant holding Terravive's fiber bowl.*

TERRAVIVE®

## A Letter from Our Founder

Terravive was founded in my parents garage. It was 2015, and while studying chemistry and environmental science, I kept coming back to the same question: **Why do we accept "good enough" when better is possible?**

Single use plastic and foam were never good enough. They were simply cheap. Decades of widespread use have shown us the impact these materials have, not only on the environment, but on human health. Years later, **I am still working toward building a future where nontoxic, plant-based disposables are the standard**, because packaging should never come with a side of chemicals.

At Terravive, we set out to prove that better is possible. We rebuilt the material first, then the manufacturing process, and then the supply chain, until "compostable" stopped being just a marketing word and became a promise backed by science, testing, and performance.

With strong patents, rigorous testing, and products designed to perform as well as the plastic they replace, **we are proving that better choices do not have to mean compromise.**

That commitment runs through sixteen manufacturing facilities across the United States, powered by people who show up every day because they believe, like I do, that the everyday coffee cups, cutlery, and to-go containers we rely on should not come at the expense of our health or the future we are building.

**No Microplastics, No PFAs added. No Toxic Chemicals. No Excuses.**

We are building Terravive to become the name in foodservice disposables that you trust the most. Because to us, trust is what worthy truly means.

Thank you for choosing products that give back more than they take. **Thank you for being part of our journey** to create disposables that are finally worthy of the food they serve, the people who use them, and the communities they support.

This is only the beginning.

Julianna Keeling

~ Julianna Keeling, Founder
& CEO of Terravive

# What touches your food should be held to the same standard as what's in it.

Chef Fernando

Backed by trusted third-party certifications and designed without the chemical compromises of traditional plastics and styrofoam, Terravive helps chefs and foodservice professionals carry their commitment to quality, safety, and integrity all the way to the guest.

**Because what your food comes in should reflect the same values as what goes into it.**

Chef Reem

# Made in USA

## compostable foodservice disposables

Terravive's plant-based, no PFAS added, BPI certified solutions eliminate the hidden risks in single-use disposables so nothing toxic comes between your food and you.

Clean materials. Safe contact. No compromises.

Chef Alex
